THE UNIVERSITY OF CHICAGO

The diagram illustrates a chemical reaction mechanism. It begins with a reactant on the left, which is a molecule with a central carbon atom bonded to three other groups. A curved arrow indicates the movement of an electron pair from one of the bonds to a new position. This leads to a transition state in the middle, which is a partially formed structure. Finally, the reaction proceeds to a product on the right, which is a molecule with a different arrangement of atoms and bonds. The diagram is labeled with 'Reactant', 'Transition State', and 'Product'.
