

Teflonised solenoid valves "IWMS" in electromechanical and Itronic dishwashers LS 60 cm (New design)

From January 1999 (series no. 902...) on, dishwashers are equipped with a new decalcifier kit IWMS consisting of 3 solenoid valves (reset, regeneration, resin cleaning) and a teflonised internal core.

This ensures proper operation of the corresponding solenoid valves which prevent the internal core from corroding due to constituents contained in the water, like e. g. lime, salt or other contaminations.

New decalcifier kit "IWMS" No. 117
Spare part No. 426 766

For the designs LS (electromechanical)
IGV 643.3
IGV 646.2

New decalcifier kit "IWMS" No. 117
Spare part No. 427 034

For the designs LS (Itronic)
IGV 658.0

Teflonised solenoid valve No. 5A
(Reset, regeneration, resin cleaning)
Spare part No. 426 878

For the designs LS (electromechanical + Itronic)
IGV 643.3
IGV 646.2
IGV 658.0
IGV 689.1

Note:

The new teflonised solenoid valve (No. 5A) 426 878 can also be fitted in the IGV 689.

Instruction for the technician

This new decalcifier kit IWMS (No. 117) replaces the earlier type and can be fitted in all dishwasher types according to the classification "electromechanical/Itronic".

The new teflonised solenoid valve (No. 5A) replaces the earlier type and can also be separately fitted in the preceding IWMS kits according to the classification "electromechanical/Itronic".
