### New adjustable feet to align appliances

Adjustable feet may need to be mounted onto appliances in order to be able to align the appliance on-site at a customer.

A set with 2 adjustable feet (50.5 mm) is available under **spare-part no. 440173**.

**Important!**  
**The plug must be pulled out before work commences!**

Proceed as follows for assembly:

1. Turn the appliance onto its side.
2. Insert the threaded bush of the adjustable foot into the underside of the appliance.

3. Then drive the threaded bush in with a hammer.

4. Make sure the threaded bush has been firmly hammered in until it stops.

5. Now screw the adjustable foot into the threaded bush.

Put the appliance upright again and level it by turning the screws in or out, making sure that the appliance is standing absolutely straight.
