### New Dryer condenser without NTC IWT 1466-OW

From the upcoming production - run out of the stock - we will introduce the new condenser without the hole for NTC probe, and new wiring without the wire for the NTC. Replacement of an "old" condenser (equipped with a probe) with a "new" condenser (**spare-parts no. 439418**), please follow the attached photo/instruction in order to guarantee the right positioning and insulation of the wiring and the NTC.

1. NTC assembled on the condenser

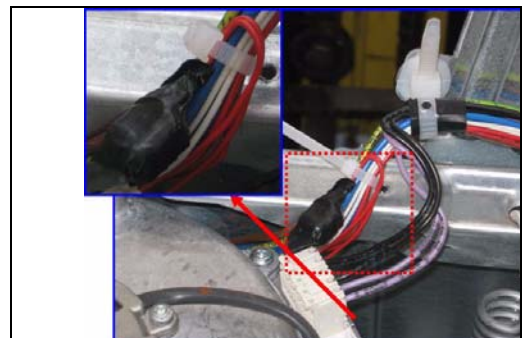

2. Completely tape the connector.

3. Anchor the connector to the wiring using a fastener.

4. Change the condenser.

### Interchangeability

**The new condenser can replace the old condenser. Warning: not vice versa!**
