

A technical drawing of a circular object, possibly a mechanical part or a container, shown in a top-down view. The drawing is enclosed in a circular border. Inside, there are several components and dashed lines indicating internal structure or assembly. Key features include:

- A central circular component with a cross-hatched pattern, possibly a motor or a sensor.
- A rectangular component with a cross-hatched pattern, possibly a battery or a control unit.
- A small rectangular component with a cross-hatched pattern, possibly a switch or a connector.
- A small circular component with a cross-hatched pattern, possibly a screw or a fastener.
- Dashed lines radiating from the center, indicating internal structure or assembly points.
- A small circular component with a cross-hatched pattern, possibly a screw or a fastener.

Technical drawing of a terminal block assembly. The main assembly is a rectangular unit with a large central cutout. It features a top row of five terminals labeled PE, L1, L2, N1, and N2. Below these are five corresponding terminals labeled X5, X2, X1, X4, and X3. A bottom row of eight terminals is labeled X12, X11, X16, X15, X17, X10, X9, X14, and X13. A partial view of a fan is shown on the left side of the drawing.
